Effect of temperature on long term float life

Storage characteristic

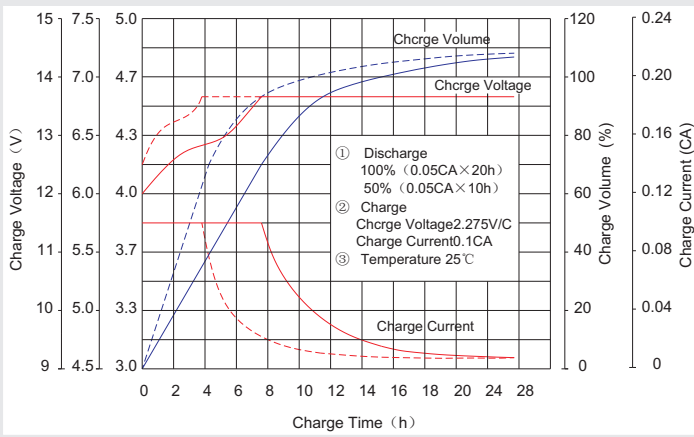

Supplementary charge required (Carry out supplementary charge before use if 100% capacity is required)

Supplementary charge required before use. This supplementary charge will help to recover the capacity and should be made as early as possible.

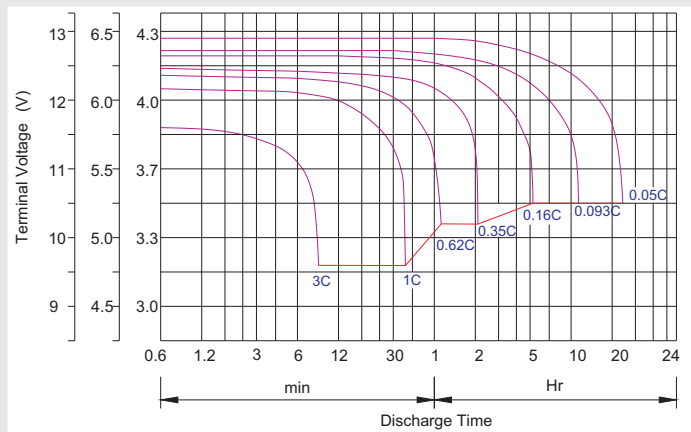

Supplementary charge may often fail to recover the capacity. The battery should never be left standing till this state is reached

Maintenance & Cautions

Float Service:

- ✳ Every month, recommend inspection every battery voltage.
- ✳ Every three months, recommend equalization charge for one time.

Equalization charge method:

Discharge: 100% rate capacity discharge.

Charge: Max. current 0.3CA, constant voltage 2.4-2.45V/Cell charge 24h.

- ✳ Effect of temperature on float charge voltage: -3mV/°C/Cell.

- ✳ Length of service life will be directly affected by the number of discharge cycles, depth of discharge, ambient temperature and charging voltage.
